

Air Sampling Pump

SP209 Series

● SP209-100Dual

● SP209-1000Dual

SP209-100Dual • SP209-1000Dual

Features

For Accuracy Control of Flow Measurement

SP209 can perform two (2) lines sampling at once by two (2) pumps. It also can perform integration of suction and its volume. Flow rate is set to display the value in 20°C conversion.

The Large Flow Rate Range is Covered

SP209-1000 Dual corresponds to the sampling cartridge which suction resistance can be large different by formaldehyde and VOC by one set. SP209-100 Dual is very high accuracy in low flow rate range and suitable for thermal desorption.

Correspondence to Suction Resistance Change

The suction capability of pumps is adjusted to be able to perform sampling at stable flow rate since it has a function that setting flow rate is maintained even if suction resistance of trapping materials or cartridge is changed. Especially when sampling is performed in a low flow rate range, the pump's revolution speed is getting slower, and noise or consumption power can be down.

Multiple Function

Setup of sampling conditions

A sampling start can be selected from the conditions of Real Time (year, month, day, hour and min) after setting time (minute) progress.

Setup of sampling end conditions

A sampling end can be selected from the lapsed time from a sampling start, the total sampling volume and the conditions of sequencing (it stops manually).

Sampling conditions are saved as file

Checking functions can be performed by a personal computer. Software is an option.

Data logging function

It is possible to visualize the sampling results on the PC.

Pulse Adjustment to Obtain Optimal Conditions

In order to obtain optimal conditions between the sampling tube and cartridge friction and the suction capability, the pump pulse is detected and the result is indicated by a three color LED (High, Good, Low). When pulse (High, Low) is displayed, adjust the pulse valve manually till you obtain "Good".

Applications

SP209-100Dual (2 mL/min-100 mL/min)

- Suitable for sampling (solid phase adsorption/thermal desorption) of VOC in indoor air measurement.
- Suitable for sampling of building materials outgassing by micro chamber.

SP209-1000Dual (20 mL/min-1000 mL/min)

- Suitable for sampling of the formaldehyde in indoor air measurement, and sampling (solid phase adsorption/solvent sampling process) of VOC.
- Suitable for sampling of building materials outgassing by small chamber.

Other Features

● Hose Connections

(standard accessory)

These are hose step connections to which it is possible to connect I.D. 3 mm and 5 mm flexible tubing.

● Filter Joint

It is possible to replace the filter and to connect any kind of joints.

● Cable Connector

The cable connectors have been placed on the front size of the pump to make easier to connect and disconnect the cable.

Specifications

Model	SP209-100Dual	SP209-1000Dual
Suction Flow Rate Range	2 mL/min to 100 mL/min	20 mL/min to 1000 mL/min
Flow Rate Measurement Accuracy	10 mL/min to 20 mL/min (within $\pm 10\%$)	100 mL/min to 200 mL/min (within $\pm 10\%$)
	21 mL/min to 100 mL/min (within $\pm 5\%$)	201 mL/min to 1000 mL/min (within $\pm 5\%$)
Flow Rate Measurement Tolerance	± 1 digit	
Setting Items	Start Condition: Promptly, After setting time, Real time	
	End Condition: After setting time, after reaching to integrating capacity, sequence (manual stop)	
Integrating Range	0.1 L to 999.9 L	0.1 L to 9999.9 L
Storage Files	5	
Flow Channels	2	
Operation Temp. Humidity Range	10°C to 35°C (10°C to 30°C), 20% to 80% RH (No condensation)	
Power Supply	DC12 V (AC adaptor: AC100-240 V 50/60 Hz)	
Power Consumption	DC12 V: 0.5 A AC100 V: 0.15 A AC220 V: 0.08 A	DC12 V: 0.9 A AC100 V: 0.2 A AC220 V: 0.1 A
Weight	3 kg approx.	
Dimension	260 (W) x 230 (D) x 99 (H) mm	

Remarks

- 1) If the suction capability of the pump is too low compared to the cartridge friction, the suction according to the set flow may not be possible.
- 2) When the suction flow of SP209-100Dual is below 10 mL/min, the Flow Rate Measurement Accuracy is out of the range, but it is possible to set the suction flow at 2 mL/min to 100 mL/min.
- 3) When the suction flow of SP209-1000Dual is below 100 mL/min, the Flow Rate Measurement Accuracy is out of the range, but it is possible to set the suction flow at 20 mL/min to 1000 mL/min.
- 4) This instrument cannot be used to detect corrosive gasses or used in atmosphere. And its structure is not anti-explosive.

3008-87000

Description	Q'ty	Cat.No.
Dedicated Stand	1 set	2702-35480
Holder for Collection Tube Set	1 set	2702-35420
Holder for Aldehyde Collection Cartridge *	1 set	3008-87000

* Usable for both InertSep mini AERO DNPH and Sep-Pak DNPH

PC control software, SP209Assistant

Editing/writing/reading of collection condition file can be done through a PC when the PC where SP209Assistant is installed is connected with SP209 via USB cable. The operability of SP209 can be improved and the various data recorded can be read during the run.

Data log function during the collection run is incorporated. During the run, collection flow rate (instantaneous measured flow rate), temperature, and humidity can be recorded and graphically displayed on a PC screen. In case of the collection for a long time, it can be confirmed whether there occurred any abnormality in flow rate of the pump or temperature (temperature inside of chassis) during the collection run. (For recording temperature or humidity, a dedicated temperature/humidity sensor is required; it is available as an optional accessory.)

Setting screen for sampling conditions

Setting contents of sampling conditions

Editing of file mode (File 1 ~ 5)

Setting of manual mode (Manu 1, 2)

Saving created file in on a PC

Writing the setting contents after sending to SP209

Reading the setting contents after receiving from SP209

Main menu screen

When the control of SP209 is booted up, the main menu screen will appear. By clicking each icon, each screen will show up.

Opening the saved file and sending to SP209 for writing

The setting contents edited by PC can be saved with a file name.

By sending the saved file to SP209 after reading, the setting contents in SP209 can be overwritten.

Log (recording) function

Display of collection results

Accumulated flow rate (volume), instantaneous (measured) flow rate, average flow speed, time to start, time to stop

Configuration function

For various environment settings of the SP209 main unit

Supported OS: Windows 7 Professional · Windows 10 Professional

Supplied media: CD-ROM

USB port, CD-ROM drive required

Accessories: SP209 Connection cable, Instruction manual

*Windows is a registered trade name of Microsoft Corporation in the U.S. valid in the U.S. and other countries

How to Use Tubing Parts

Connect the collection tube or cartridge to the suction port of SP209 in the manner as shown in the figure below. Cut the PTFE tube or silicon tube in the suitable length required.

Example of Connection for PTFE Tube with 2 mm I.D.

Example of Connection for Silicon Tube with 5 mm I.D.

Example of Connection for Silicon Tube with 3 mm I.D.

Calibration Function

Calibration drying tube kit for SP209 will trap the soap generated from high precision film flowmeter. As shown in the right figure, by connecting the exit port of standard flowmeter with the suction port of SP209 Dual, direct flow calibration can be done.

Configuration of Calibration Drying Tube Kit for SP209

- ① Silica Gel Drying Tube x 1 set
- ② Screen x 20 ea.
- ③ Silicon Plug x 1
- ④ Silicon Tube (6 O.D. x 3 mm I.D. x 2 m Length) x 1 ea.
- ⑤ Silicon Tube (9 O.D. x 5 mm I.D. x 2 m Length) x 1 ea.
- ⑥ Silicon Tube (13 O.D. x 9 mm I.D. x 2 m Length) x 1 ea.

Description	Q'ty	Cat.No.
Calibration Drying Tube Kit for SP209	1 set	3001-11540

Remarks 1) This is usable for SP208 Dual II.

Remarks 2) For calibration in auto mode, an optional communication cable for flowmeter (Cat. No : 3001-11540) is required.

Notice) Flow rate accuracy cannot be guaranteed when the flow rate adjustment is carried out by the customer.

Smart Bag PA

This is a bag made of vinyl alcohol series polymer film and has superior solvent resistance, heat resistance and adsorption resistance, assuring an extremely small amount of elution of impurities from the materials. In addition, it has excellent permeation resistance and does not permeate most gases. Due to its special characteristics, this bag can be applied to a wide range of samples, from inorganic gases to gaseous organic compounds. The upper temperature limit of this bag is 120°C.

Tedlar Bag

This bag has superior resistance to organic solvent. In addition, it is excellent in mechanical strength and usable in a wide temperature range, from 70°C to 100°C. In general, this bag is suitable for use with a wide range of samples from inorganic gas to gaseous organic solvent.

Aluminum Bag

Aluminum bag is made of laminated film consisting of 5 layers including, from the outer layer, nylon, polyethylene, aluminum foil, polyethylene, and polyethylene. It has a sufficient mechanical strength and would not permeate almost all gases including inorganic gas or methane gas. It is also very effective for the samples which require light shielding. The organic solvent with the high boiling point is rather adsorptive for this bag and some organic substances may elute from the bag itself. There is a large-sized line-up of bags from 20 L to 200 L, in addition to many kinds of bags from 1 L to 200 L.

Specifications

- Made of laminated film consisting of 5 layers including, nylon, polyethylene, aluminum foil, polyethylene, polyethylene
- Upper-temperature limit: 65°C
- Permeability resistance to inorganic gas, methane, etc.
- Film thickness: 120 µm

Main application: Organic solvent, etc.
